

Measure of Victim Empowerment Related to Safety (MOVERS) Scale

MOVERS is a 13-item scale that measures survivor empowerment within the domain of safety. It is available in English and Spanish and demonstrates a strong factor structure and high reliability and validity in IPV survivors seeking services.

MOVERS is composed of three subscales that assess distinct domains of safety related empowerment: Internal Tools assesses the extent to which a survivor has developed a set of safety-related goals and a belief in her ability to accomplish them (items 1,3,5,7,9,11; alpha = .88). Expectation of Support assesses the degree to which a survivor perceives that she has the support she needs to move towards safety (4,8,12,13; alpha = .74); and Trade-offs assesses the extent to which the survivor feels that her efforts to achieve safety will trigger new problems (2,6,10; alpha = .82). Participants respond to each item using a five-point Likert scale (from “never true” to “always true”). Scores on each subscale are summed and averaged to produce subscale scores.

YOUR SAFETY

You may be facing a variety of different challenges to safety. When we use the word *safety* in the next set of questions, we mean safety from physical or emotional abuse by another person.

Please circle the number that best describes how you think about your and your family's safety right now. When you are responding to these questions, it is fine to think about your family's safety along with your own if that is what you usually do.

	Never True	Sometimes True	Half the Time True	Mostly True	Always True
